Bash Append Text To a Variable

Posted by [Vivek Gite](#) <vivek@nixcraft.com>

How do I append additional text a variable? For e.g., I've a vech set as follows:
vech="London"
I'd like to add (append) "Bus" word to \$vech under UNIX scripting using bash?

You can simply use the following syntax:

[1]

```
vech="London"  
vech="$vech Bus"  
echo $vech
```

If you don't want to update \$vech, but just want to print it on screen, enter:

```
echo "$vech Bus"
```

You can also append another variable:

```
x="Mango"  
y="Pickle"  
x="$x $y"  
echo "$x"
```
