## Solaris backspace key issue problem and solution

Posted by [Vivek Gite](#) <[vivek@nixcraft.com](mailto:vivek@nixcraft.com)>

Q. When you telnet from Solaris 9 to other UNIX box the backspace key does not work. This is not at all convenient to me. How do I fix this issue?

A. You need to use `stty` command which is used to change and print terminal line settings. Type the following commands:

```
$ stty intr  
$ stty erase  
$ stty echoe
```

Now your backspace key should work.

See also:

- Read the man page of `stty` for more information.
