Linux Command to find the system configuration and hardware information

Posted by [Vivek Gite](#) <vivek@nixcraft.com>

Q. What is the command to find the system configuration on Linux operating system using command line (text) mode?

A. Most of the hardware information can be extracted from /proc file system, for example display CPU and Memory information, enter:

```
cat /proc/meminfo  
cat /proc/cpuinfo
```
