Command to run (execute) bin files in Linux

Posted by [Vivek Gite](#) <vivek@nixcraft.com>

Q. I have downloaded a file from internet that ends with .bin extension. Documentation says just run bin file. What command I need to type in order to run bin files in Linux.

A. .bin files are Linux self extracting binary files. For example Java or Flash are two examples of these types of file. Just type following two commands to run .bin files:

[1]

Run .bin file in Linux / UNIX

Change the permission of the file you downloaded to be executable. Type the following command:

```
$ chmod +x file.bin
```

Start the installation process or run .bin file. Type the following command:

```
./file.bin
```

For example if .bin file name is application.bin. Type:

```
$ chmod +x application.bin  
$ ./application.bin
```

Another example for Java Linux self extracting binary file:

```
# chmod +x jre-1_5_0-linux-i586.bin  
# ./jre-1_5_0-linux-i586.bin
```
