## Linux Gnome: Networkmanger Connects To Wrong Default Wireless Access Point

Posted by [Vivek Gite](#) <[vivek@nixcraft.com](mailto:vivek@nixcraft.com)>

**Q.** I'm using Ubuntu Linux and my Gnome network manger always connects to wrong default WAP / AP after login ( boot ). How do I fix this problem?

**A.** To fix this problem go to `~/.gconf/system/networking/wireless/networks` directory and remove SSID directory. If your SSID is set to nixcraft, remove following directory:

[1]

```
rm -rf ~/.gconf/system/networking/wireless/networks/nixcraft
```

Restart Gnome or restart system to test new changes.
