## x86\_64 Linux Error: gnu/stub-32.h missing error and solution

Posted by [Vivek Gite](#) <[vivek@nixcraft.com](mailto:vivek@nixcraft.com)>

**Q.** I'm getting the following error while compiling application under CentOS / RHEL / Fedora Linux 64 bit edition:

```
/usr/include/gnu/stubs.h:7:27: error: gnu/stubs-32.h:
```

```
No such file or directory
```

How do I fix this error?

[1]

**A.** You need to install the glibc-devel package. It contains the object files necessary for developing programs which use the standard C libraries (which are used by nearly all programs). If you are developing programs which will use the standard C libraries, your system needs to have these standard object files available in order to create the executables.

Install glibc-devel if you are going to develop programs which will use the standard C libraries.

```
# yum -y install glibc-devel
```

Now again try to recompile application.
