Re register Linux Server System with RHN (Red Hat Network)

Posted by [Vivek Gite](#) <vivek@nixcraft.com>

Q. After re-installing my HP server system, RHN is not working. How do I re-register my system with Red Hat Network (RHN) again?

[1]

A. This is known issue and it can be easily fix after reinstalling system. All you have to do is login to RHN web management [online](#) [2].

a) Look for **Systems** tab in

b) Select the name of the **old system** in the System List.

c) Now delete it by clicking on the **delete system** link

d) **Confirm** the removal

e) Login to your system and delete **/etc/sysconfig/rhn/systemid** file using rm command, enter:

```
# rm /etc/sysconfig/rhn/systemid
```

f) Now register box with the update agent using **rhn_register**, enter:

```
# rhn_register
```

rhn_register is a client program that registers your system with Red Hat Network (or a Red Hat Network Satellite). After registering, your system can receive software updates, install new software, and remotely manage your system. It can run both in graphical and text modes.
