How to run the .sh file in shell script in Linux / UNIX

Posted by [Vivek Gite](#) <vivek@nixcraft.com>

Q. I've downloaded a software for Linux from net. There is a file called install.sh. How do I run .sh file to install the software?

A. .sh file is nothing but a shell script. The easiest way to run .sh shell script in Linux is as follows:

sh file.sh

bash file.sh

Another option is set executable permission using chmod command:

chmod +x file.sh

Now run .sh file as follows: execute

./file.sh
