## Nginx Force (Redirect) WWW.Domain.COM To Domain.COM

Posted by [Vivek Gite](#) <[vivek@nixcraft.com](mailto:vivek@nixcraft.com)>

I know [how to force and redirect](#) <sup>[2]</sup> [www.example.com](#) to [example.com](#) under Lighttpd web server. How do I force nginx web server to redirect [www.example.com/page/1/2/3](#) to [example.com/page/1/2/3](#)?

You can easily redirect www to nowww domain for SEO and other purposes using the following syntax. Edit nginx.conf file, enter:

```
# vi /usr/local/nginx/conf/nginx.conf
```

To force [www.theos.in/page.html](#) to [theos.in/page.html](#), enter:

```
### redirect www to nowww with client code 301 ###
if ($host = 'www.theos.in' ) {
    rewrite ^/(.*)$ http://theos.in/$1 permanent;
}
```

Save and close the file. Test and reload nginx webserver, enter:

```
# /usr/local/nginx/sbin/nginx -s reload
```

Fire a webbrowser and type the url:

<http://www.theos.in/windows-xp/free-fast-public-dns-server-list/> <sup>[3]</sup>

It should be redirected to

<http://theos.in/windows-xp/free-fast-public-dns-server-list/> <sup>[4]</sup>
