make buildworld cd: can't cd to /usr/src/tools/build/make_check Error and Solution

Posted by [Vivek Gite](#) <vivek@nixcraft.com>

I'm trying buildworld under FreeBSD operating system. But I'm getting an error which read as follows:  ^[1]

```
-----  
>>> Building an up-to-date make(1)  
-----  
cd: can't cd to /usr/src/usr.bin/make  
*** Error code 2  
  
Stop in /usr/src.  
*** Error code 1  
  
Stop in /usr/src.
```

How do I fix this problem?

You need upto date FreeBSD source tree. Type the following command to fetch FreeBSD src tree:

```
# cp /usr/share/examples/cvsup/standard-supfile /root/standard-supfile  
# vi /root/standard-supfile
```

Set default host as follows:

```
*default host=cvsup4.us.FreeBSD.org
```

Save and close the file. Now get source code, enter:

```
# cvsup /root/standard-supfile
```

To build system use regular commands:

```
# make clean && make buildworld  
# make buildkernel KERNCONF=kernelname  
# make installkernel KERNCONF=kernelname
```

See how-to: [Update The FreeBSD From Previous Releases Using Source Code \(CVSUP method\)](#) ^[2] for details about building world and install a new kernel under FreeBSD operating system.
