## Redhat Linux yum grouplist and groupinstall Option Not Working

Posted by [Vivek Gite](#) <[vivek@nixcraft.com](mailto:vivek@nixcraft.com)>

I'm trying to install all the default packages by group using '[yum groupinstall groupname](#)'<sup>[2]</sup> command under RHEL v5.x. But, grouplist, groupinstall, and groupdelete options are not working with yum. How do I fix this issue and make sure yum command works with software groups under Redhat Enterprise Linux to increase my productivity?

You need to install a package called yum-utils. It is a collection of utilities and examples for the yum package manager. It includes utilities by different authors that make yum easier and more powerful to use. These tools include: debuginfo-install, package-cleanup, repoclosure, repodiff, repo-graph, repomanage, repoquery, repo-rss, reposync, repotrack, verifytree, yum-builddep, yum-complete-transaction, yumdownloader, yum-debug-dump and yum-groups-manager.

## Install yum-utils

Type the following command:

```
# yum install yum-utils
```

To list software groups enter:

```
# yum grouplist
```

Sample output:

```
Loaded plugins: rhnplugin, security
Setting up Group Process
Installed Groups:
  Engineering and Scientific
  Graphics
  Network Servers
  System Tools
Available Groups:
  Administration Tools
  Authoring and Publishing
  Development Tools
  Editors
  Educational Software
  FTP Server
  Fedora Packager
  GNOME Desktop Environment
  GNOME Software Development
  Games and Entertainment
  Graphical Internet
  Hardware Support
  KDE (K Desktop Environment)
  KDE Software Development
  Mail Server
  News Server
  Office/Productivity
  Sound and Video
  Text-based Internet
  Web Development
  Web Server
  Window Managers
  X Window System
Done
```

To install "Web server" group, enter:

```
# yum groupinstall "Web server"
```
