RHEL / CentOS Xcache: /usr/include/php/ext/date/lib/timelib_structs.h:24:28: error: timelib_config.h: No such file or directory Error and Soutlion

Posted by [Vivek Gite](#) <vivek@nixcraft.com>

I'm trying to configure and install [xcache under CentOS / Redhat](#) ^[2] enterprise Linux v5.4 and getting the following error:

/usr/include/php/ext/date/lib/timelib_structs.h:24:28: error: timelib_config.h: No such file or directory

How do I fix this problem and install xcache?

This is well known problem and it can be easily fixed by editing the /usr/include/php/ext/date/lib/timelib_structs.h file itself. Type the following command to edit the file, run:

[3]

[4]

```
# vi /usr/include/php/ext/date/lib/timelib_structs.h
```

Find line:

```
#include <timelib_config.h>
```

Replace / update as follows:

```
#include "timelib_config.h"
```

Save and close the file. Now, you can [compile the xcache](#) ^[2]:

```
# make install
```
