sudo: sorry, you must have a tty to run sudo error and Soution

Posted by [Vivek Gite](#) <vivek@nixcraft.com>

I'm trying to run the following command:
`ssh user@box.example.com sudo command1 /path/to/file`

But It give me an error which read as follows:

sudo: sorry, you must have a tty to run sudo

How do I fix this problem?

This is done in Fedora, RHEL, CentOS and many other Linux distribution for security concern as it will show the password in clear text format. You have to run your ssh command as follows to avoid this error:

```
ssh -t hostname sudo command
ssh -t user@hostname sudo command
ssh -t user@box.example.com sudo command1 /path/to/file
```

The -t option force pseudo-tty allocation. This can be used to execute arbitrary screen-based programs on a remote machine, which can be very useful, e.g., when implementing menu services. Multiple -t options force tty allocation, even if ssh has no local tty.
