## Analog Input: Cannot display this video mode error and solution

Posted by [Vivek Gite](#) <[vivek@nixcraft.com](mailto:vivek@nixcraft.com)>

Q. I am getting following error:  
Analog Input: Cannot display this video mode.

What is the meaning of this error and How do I fix it?

A. This error indicates that current monitor refresh rate is not correct i.e out of monitor range. You need to consult monitor manufacturer to get correct refresh rate values (visit web site or read manual). Once you got the correct values, reconfigure your monitor (X windows) using any one the command (as per your Linux distribution) mentioned [here](#) <sup>[1]</sup>.
