How to use bash shell

Posted by [Vivek Gite](#) <vivek@nixcraft.com>

Q. How do I use bash shell? What command I need to type use bash shell?

A. GNU Bourne-Again Shell is default shell on most Linux systems (distributions). So when you open terminal from X Windows (KDE/Gnome) you directly opens a bash shell. Bash is an sh-compatible command language interpreter that executes commands read from the standard input or from a file.

To find out your shell version type:

```
$ echo $SHELL
```

Output:

```
/bin/csh
```

If you are using different shell, just type bash at command prompt and load bash shell:

```
$ bash
```
