My scripts in cgi-bin directory not working, how do I troubleshoot this problem?

Posted by [Vivek Gite](#) <vivek@nixcraft.com>

You need to add ScriptAlias directive to your httpd.conf file. By default Apache server try to locate file from /var/www/cgi-bin (RedHat/Fedora Linux) or /usr/lib/cgi-bin (Debian Linux). Add following line to your domain configuration (vhost):

```
ScriptAlias /cgi-bin/ "/home/httpd/cyberciti.biz/httpdocs/cgi-bin/"
```
