

ACCESSING SERVER(OHS) STATUS FROM BROWSER

STEPS:

1-Go to O_H/mid/Apache/Apache/conf

2-cp httpd.conf httpd.conf_bkp (backup the httpd.conf file in the same location)

3-vi httpd.conf file

add this lines to the file----->

```
root@of582:/d01/praveen/mid/Apache/Apache/conf
File Edit View Terminal Tabs Help
ExtendedStatus On
<Location /server-status>
    SetHandler server-status
    order deny,allow
    deny from all
    allow from of582.orafact.com
</Location>

### Section 2: 'Main' server configuration
#
# The directives in this section set up the values used by the 'main'
# server, which responds to any requests that aren't handled by a
# <VirtualHost> definition. These values also provide defaults for
# any <VirtualHost> containers you may define later in the file.
#
# All of these directives may appear inside <VirtualHost> containers,
# in which case these default settings will be overridden for the
# virtual host being defined.
#
#
# If your ServerType directive (set earlier in the 'Global Environment'
# section) is set to "inetd", the next few directives don't have any
```

ExtendedStatus on

<Location /server-status>

SetHandler server-status

order deny,allow

deny from all

allow from of582.orafact.com

</Location>

_____save and exit

ACCESSING SERVER(OHS) STATUS FROM BROWSER

4-open browser type address <http://of582.orafact.com:7777/server-status>

The screenshot shows a Mozilla Firefox browser window with the title "Apache Status - Mozilla Firefox". The address bar displays the URL "http://of582.orafact.com:7777/server-status". The browser's menu bar includes File, Edit, View, Go, Bookmarks, Tools, and Help. The status bar at the bottom shows "OSS" and "Support".

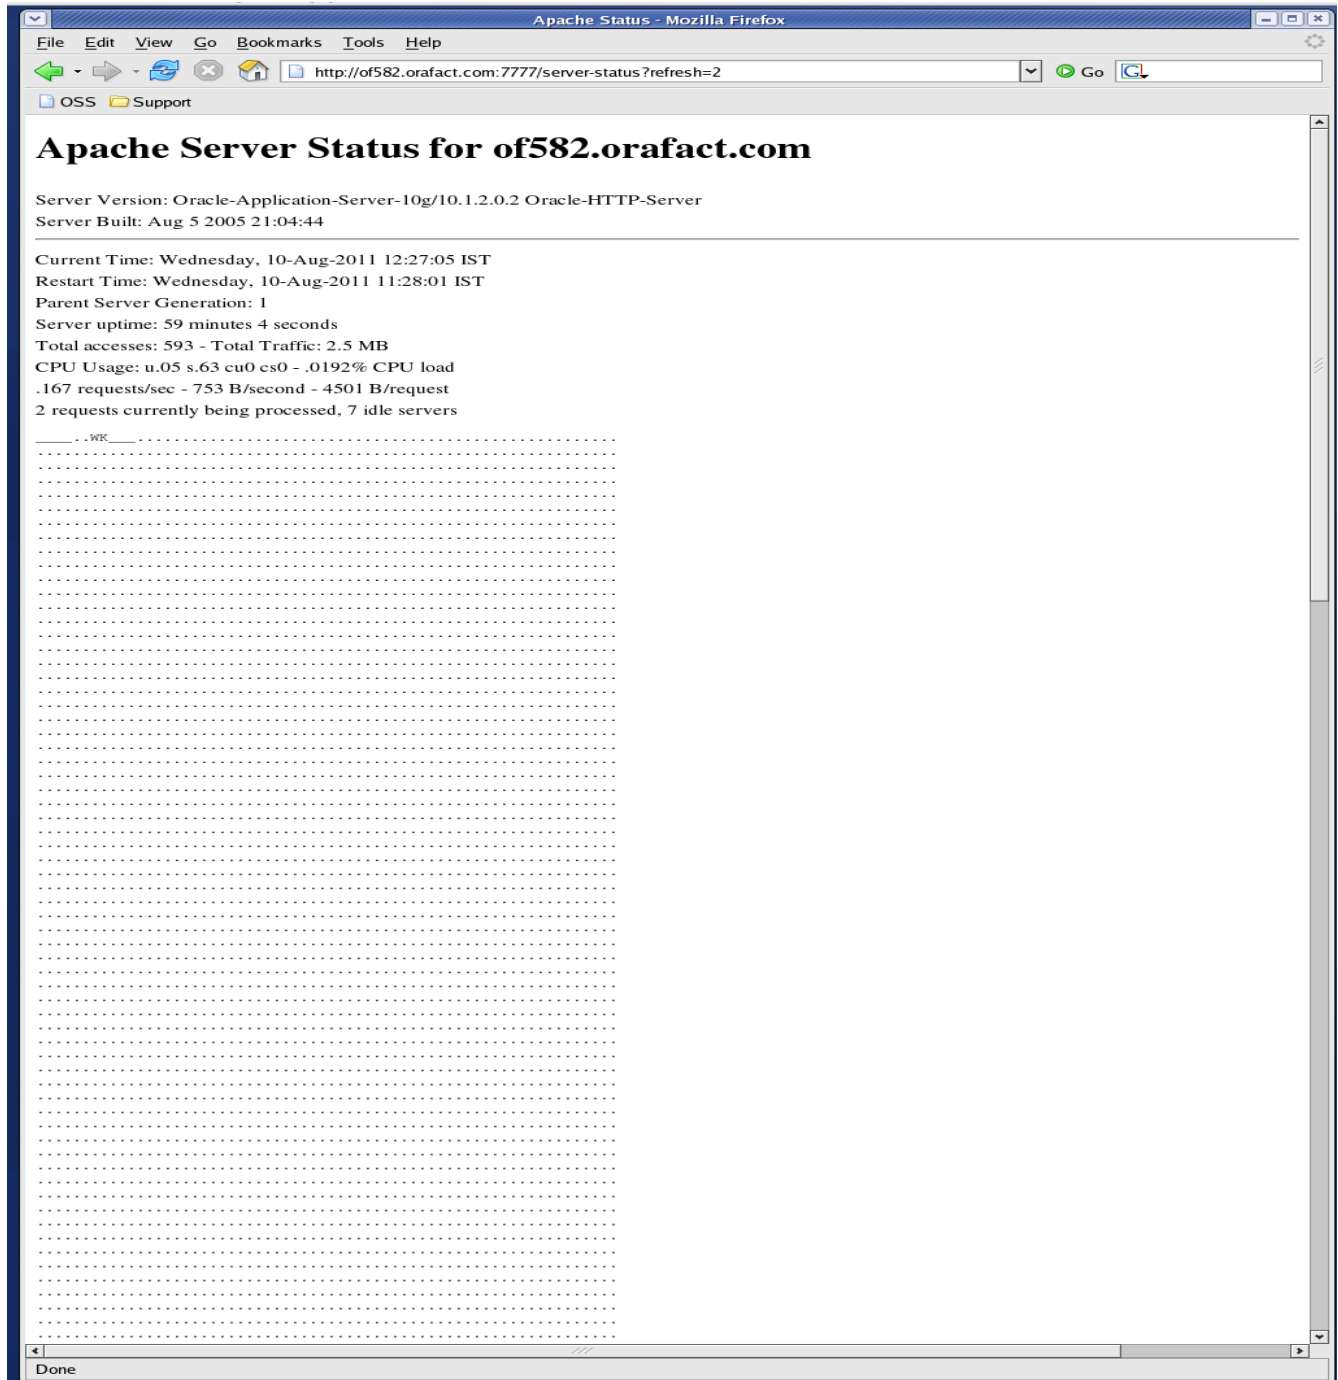

The main content area displays the "Apache Server Status for of582.orafact.com". The status information is as follows:

- Server Version: Oracle-Application-Server-10g/10.1.2.0.2 Oracle-HTTP-Server
- Server Built: Aug 5 2005 21:04:44
- Current Time: Wednesday, 10-Aug-2011 12:04:55 IST
- Restart Time: Wednesday, 10-Aug-2011 11:28:01 IST
- Parent Server Generation: 1
- Server uptime: 36 minutes 54 seconds
- Total accesses: 361 - Total Traffic: 1.6 MB
- CPU Usage: u.02 s.39 cu0 cs0 - .0185% CPU load
- .163 requests/sec - 755 B/second - 4634 B/request
- 1 requests currently being processed, 8 idle servers

Below the status information, there is a large area of dotted lines, which is a placeholder for a detailed status report that is not fully visible in the screenshot.
