Solaris UNIX: Show Network Routing Table Information

Posted by [Vivek Gite](#) <vivek@nixcraft.com>

How do I show networking routing table information under Solaris UNIX operating systems using a shell prompt?

You need to use the netstat command to display the IP routing table under Solaris UNIX operating systems.

netstat command example

Type the following commands:

```
netstat -r
```

OR

```
/usr/bin/netstat
```

OR

```
netstat -rn
```
