FreeBSD pkg_add: warning: package php5-pcre-5.2.6_2 requires php5-5.2.8, but php5-pcre-5.2.6_2 is installed

Posted by [Vivek Gite](#) <vivek@nixcraft.com>

Q. I'm trying to upgrade my PHP version from 5.2.6 to 5.2.8 using portupgrade command. But I'm getting following errors:

```
*** Error code 1
```

```
Stop in /usr/ports/lang/php5.
```

```
*** Error code 1
```

```
Stop in /usr/ports/lang/php5.
```

```
*** Error code 1
```

```
Stop in /usr/ports/lang/php5.
```

```
** Command failed [exit code 1]: /usr/bin/script -qa /tmp/portupgrade.42275.0 env
```

```
UPGRADE_TOOL=portupgrade UPGRADE_PORT=php5-pcre-5.2.6_2
```

```
UPGRADE_PORT_VER=5.2.6_2 make reinstall
```

```
---> Restoring the old version
```

```
pkg_add: warning: package 'php5-pcre-5.2.6_2' requires 'php5-5.2.8', but 'php5-pcre-5.2.6_2' is installed
```

```
** Fix the installation problem and try again.
```

```
[Updating the pkgdb
```

```
in /var/db/pkg ... - 62 packages found (-0 +1) . done]
```

```
** Listing the failed packages (-:ignored /*:skipped /!:failed)
```

```
! lang/php5 (php5-pcre-5.2.6_2) (install error)
```

How do I fix this problem and upgrade php5-pcre?

A. This is well known problem and can be fixed easily.

As of php 5.2.7, pcre extension is distributed with the core php5 package, and not as a standalone module anymore. Follow these steps to update your installation:

```
# pkg_delete -f php5-pcre-5.2.6
# pkgdb -F
# portupgrade php5-pcre
```

If you are using portmaster, enter:

```
# pkg_delete -f php5-pcre\*
# portmaster php5\*
```

If you are using pecl ports you might need to force an update on them, enter:

```
# portupgrade -f pecl\*
```

OR

```
# portmaster pecl\*
```

If you have the pecl hash, json and/or zip extensions you need to replace them with the php5 bundled ones, enter

```
# portupgrade -o archivers/php5-zip archivers/pecl-zip
# portupgrade -o devel/php5-json devel/pecl-json
# portupgrade -o security/php5-hash security/pecl-hash
```

OR

```
# portmaster -o archivers/php5-zip archivers/pecl-zip
# portmaster -o devel/php5-json devel/pecl-json
# portmaster -o security/php5-hash security/pecl-hash
```

Finally ,build your INDEX locally and you tried to build it after the php update commit, you need to rebuild it after you updated lang/php5:

```
# cd /usr/ports
# make index
```
