Fedora Core Linux chkconfig does not display service name

Posted by [Vivek Gite](#) <vivek@nixcraft.com>

Q. I have server / service is installed but it does not show up in the chkconfig --list output. I need to use full path /etc/init.d/service start. I am using Fedora Core Linux and Cent OS (RHEL based) distos.

How do I solve this problem?

A. Use --add option to add the service to chkconfig database. For example:

```
# chkconfig --add lighttpd
```

Where,

- lighttpd: Service name.

Now see the list with the following command:

```
# chkconfig --list | less
```

To turn on service at boot time:

```
# chkconfig lighttpd on
```

To turn off service at boot time:

```
# chkconfig lighttpd off
```

Read man page of chkconfig for more information.
