How To Take A Screenshot Using Linux tvtime Application

Posted by [Vivek Gite](#) <vivek@nixcraft.com>

Q. I use my system as Linux digital tv and tvtime application to watch TV. How do I take a screenshots under tvtime?

A. tvtime has inbuilt option for taking screenshots via the core set of key bindings.

Start tvtime

Press **s** key to take a screenshot

[1]

How do I force the screenshots to be a specific filename?

tvtime's screenshots can be given a filename when requested using tvtime-command. Simply type the following command to control a running tvtime process:

```
$ tvtime-command SCREENSHOT "myfileTitile.png"
```

And the screenshot will output as myfileTitile.png". This is useful for scripts which upload the latest image from the TV to a webpage or blog, for example.
