FreeBSD acd0: FAILURE – unknown CMD (0x03) ILLEGAL REQUEST ASC=0x20 ascq = 0x00 Error and Solution

Posted by [Vivek Gite](#) <vivek@nixcraft.com>

I've installed X11 under FreeBSD operating systems using ports and rebooted the computer and I'm getting the following error:

acd0: FAILURE - unknown CMD (0x03) ILLEGAL REQUEST ASC=0x20 ascq = 0x00

How do I fix this problem?

You are getting error message because of your DVD/CD drive. You can run the following command to get rid of this problem

```
hal-disable-polling --device {/dev/CDDriveDeviceName}
```

If your CD drive name is acd0, enter:

```
hal-disable-polling --device /dev/acd0
```
