Lighttpd checking for GTHREAD... configure: error: Package requirements (gthread-2.0 >= 2.4.0) were not met error and solution

Posted by [Vivek Gite](#) <vivek@nixcraft.com>

Q. I'm trying to install lighttpd 1.5.0 while compiling source code I'm getting an error which read as follows:

checking for GTHREAD... configure: error: Package requirements (gthread-2.0 >= 2.4.0) were not met:

No package 'gthread-2.0' found

Consider adjusting the PKG_CONFIG_PATH environment variable if you installed software in a non-standard prefix.

Alternatively, you may set the environment variables GTHREAD_CFLAGS and GTHREAD_LIBS to avoid the need to call pkg-config. See the pkg-config man page for more details.

How do I fix this issue; I'm using Fedora Core 6.x.

A. You need to install a package called **glib2-devel**. Lighttpd 1.5.x+ requires glib2-2.4.0 or higher.

Type the following command if you are using Redhat (RHEL) or Fedora Core or Cent OS:

```
# yum install glib2-devel
```

If you are using Debian/Ubuntu try following command:

```
# apt-get install libglib2.0-dev
```

OR

```
$ sudo apt-get install libglib2.0-dev
```

Now compile and install lighttpd:

```
# ./configure;make;make install
```
