Ubuntu Linux restart network

Posted by [Vivek Gite](#) <vivek@nixcraft.com>

Q. I'm new to Linux and installed Ubuntu Linux successfully on my HP Laptop. Now I need to restart my network. How do I restart network under Ubuntu Linux?

A. Ubuntu Linux comes with a script called networking (**Ubuntu restart network** command)– it is use to activates or deactivates or restart all network interfaces (NIC) configured to start at boot time.

[1]

Ubuntu Linux restart network command

Open shell or terminal and type the command as follows:

```
$ sudo /etc/init.d/networking restart
```

You can this command on remote Ubuntu Linux server without any problem, but make sure you pass only restart option. This command also accepts start and stop options:

WARNING! These examples may stop remote networking service if executed. Always, use **restart option** over ssh session.

```
$ sudo /etc/init.d/networking start  
$ sudo /etc/init.d/networking stop
```
