## See what is going on the Linux console screen

Posted by [Vivek Gite](#) <[vivek@nixcraft.com](mailto:vivek@nixcraft.com)>

/dev/vcsN is a character device i.e. it refers to the memory of the currently displayed virtual console terminal. These are character devices for virtual console terminals, they have major number 7 and minor number 1 to 63.

You may do a screendump on using cat command (vt2) or just see what is going on the Linux console screen:

```
# cat /dev/vcs2 > /tmp/output.vt2.  
# cat /dev/vcs2
```

It may be handy to monitor remote system vts.
