Install Language support in CentOS 5 or Red Hat Enterprise Linux

Posted by [Vivek Gite](#) <vivek@nixcraft.com>

Q. How do I install Languages in Linux after installation? I don't have any language specific support installed but need to install the same. I'm using both RHEL 5 and CentOS 5.

[1]

A. Yellow dog Updater, Modified, a package manager for RPM-compatible Linux systems such as CentoS 5/Fedora 7 and RHEL 5. Yum's repository system is quickly becoming the standard for RPM-based repositories.

If the languages were not installed during the installation, the same can be installed by YUM command. Use following command to install Hindi and Chinese support.

```
# yum groupinstall {LANGUAGE-support}
```

```
# yum install "@Hindi Support"  
# yum install "@Chinese Support"
```

Use **yum grouplist** list available groups and languages.
