## How do I Load / Start RHEL / CentOS / Fedora Linux Iptables Firewall on Computer Boot?

Posted by [Vivek Gite](#) <[vivek@nixcraft.com](mailto:vivek@nixcraft.com)>

**Q.** I'd like to start my Iptables based firewall when my computer comes online so that it get protected from the Internet? I'm using CentOS Linux Server version 4.x.

**A.** CentOS / RHEL / Fedora Linux has service located at /etc/init.d/iptables to start firewall on boot. All you have to do is type the following command to turn on firewall on boot:

[1]

```
# chkconfig iptables on
```

Your firewall rules are saved at /etc/sysconfig/iptables files.
