## Can't re-open pipe to command substitution (fd 4): No child processes error and solution

Posted by Vivek Gite <vivek@nixcraft.com>

Q. I'm running Debian Linux 64 bit server. I'm getting an error which read as follows: Can't re-open pipe to command substitution (fd 4): No child processes

How do I fix the problem?

A. This error occurs when Linux server run out of open files maximum limit i.e system cannot create or open a new file due to number of open files reached the maximum limits of files.

To solve this problem just configure the system to accept the more open files. Please see previous faq:

• Linux increase the maximum number of open files or file descriptors [2]

4000+ howtos and counting! Want to read more Linux / UNIX howtos, tips and tricks? Subscribe to our <u>daily email</u> newsletter or <u>weekly newsletter</u> to make sure you don't miss a single tip/tricks. Alternatively, subscribe via RSS/XML feed.
