### **Apache Web Server Cache Frequently Used Files To Improve Performance**

Posted by Vivek Gite <vivek@nixcraft.com>

« « Previous in series <sup>[2]</sup> Next in series » » <sup>[1]</sup>

Q. I'd like to cache few static pages or files that are viewed frequently such as index.html or order.html and so on. How do I cache files under Apache with using proxy solution?

A. You need to use mod\_file\_cache which can cache frequently requested files that change very infrequently is a technique for reducing server load. mod\_file\_cache provides two techniques for caching frequently requested static files. These techniques reduce server load when processing requests for these files by doing part of the work (specifically, the file I/O) for serving the file when the server is started rather than during each request.

 $\Lambda$ 

WARNING! You cannot use this moule for speeding up CGI/php/perl/python dynamic programs. It can

only be used for regular files which are usually served by the Apache core content handler.

## How do I configure mod\_file\_cache?

Open your httpd.conf file, enter:

# vi httpd.conf

To cache index.html and fags.html, enter:

MMapFile /var/www/domain.com/index.html MMapFile /var/www/domain.com/faqs.html

# How do I cache all static files in a directory called /kb/?

Try the following code to get listing of all files:

```
# find /var/www/domain.com/kb/ -type f -print | sed -e 's/.*/mmapfile &/' >
/etc/httpd/conf.d/mmap.conf
```

Now open httpd.conf file, using the Include directive:

Include /etc/httpd/conf.d/mmap.conf

Save and close the file. Restart httpd:

# service httpd restart
