#### **How to: Stop X.Org Server**

Posted by Vivek Gite <vivek@nixcraft.com>

Q. How do I start or stop X.Org from a command prompt?

A. X.org is open-source implementation of the X11 system. It is an open source X11-based desktop infrastructure. Xorg provides an interface between your hardware and the graphical software you want to run. Besides that, Xorg is also fully network-aware, meaning you are able to run an application on one system while viewing it on a different one.

### Start X.Org Server

There are two ways, just type startx:

\$ startx

Alternatively, run init script such as /etc/init.d/gdm

# /etc/init.d/gdm start

OR

\$ sudo /etc/init.d/gdm start

## Ctrl+Alt+Backspace - to stop server

Press Ctrl+Alt+Backspace to immediately kill the server - no questions asked.

Agian, you can use init script to stop session:

# /etc/init.d/gdm stop

OR

\$ sudo /etc/init.d/gdm stop
