## FreeBSD Install Isof To Displays Information About Files Open to Unix processes

Posted by Vivek Gite <vivek@nixcraft.com>

Q. How do I install the free, open-source, Unix administrative tool called Isof (for LiSt Open Files) under FreeBSD operating system to displays information about files open to Unix processes?

A. Isof lists information about files opened by processes

for the varios UNIX dialects. An open file may be a regular file, a directory, a block special file, a character special file, an executing text reference, a library, a stream or a network file (Internet socket, NFS file or UNIX domain socket.) A specific file or all the files in a file system may be selected by path.

## FreeBSD install Isof package

Type the following command to update current ports collection and install Isof from ports:

```
# portsnap fetch update
# cd /usr/ports/sysutils/lsof
# make install clean
```

Now you can use Isof commad, enter:

```
# lsof
# lsof -i -U
# lsof -i 4 -a -p 2053
# lsof -i 6
$ man lsof
```
