## **Linux Disabling Squid Proxy Server**

Posted by Vivek Gite <vivek@nixcraft.com>

Q. How do I disable Squid Proxy Serer under CentOS Linux operating system so that I can directly connect to the internet?

[1]

A. To disable squid proxy server or service you need to type the following command as the root user

[a] chkconfig command - provides a simple command-line tool for maintaining the /etc/rc[0-6].d directory hierarchy by relieving system administrators of the task of directly manipulating thenumerous symbolic links in those directories. [b] service command - start / stop / restart or run a System V init script or services such as httpd or squid.

## Task: Stop Squid

Type the following command:

# service squid stop

OR

# /etc/init.d/squid stop

To turn off service on boot, enter:

# chkconfig squid stop

You may also need to disable http\_proxy variable by editing shell startup files. At shell prompt enter:

export http\_proxy=

You need to edit GUI browser Internet settings to disable proxy access.
