HP-UX: Find Out If Recommend Security Patch Applied Or Not

Posted by Vivek Gite <vivek@nixcraft.com>

How do I compare the HP-UX UNIX system output with the most current vendor recommended and security patches?

You need to use swlist command to display information about software products under HP-UX unix operating system.

[1]

To shows products, subproducts and filesets under HP-UX UNIX, enter:

```
# swlist -l fileset
```

To find applied patch or not, enter:

```
# swlist -l fileset | grep patch
```

To display all categories of available patches for patches that have included category objects in their definition, enter:

```
# swlist -l category
```

To display all applied patches, enter:

```
# swlist -l patch
```

4000+ howtos and counting! Want to read more Linux / UNIX howtos, tips and tricks? Subscribe to our daily email newsletter or weekly newsletter to make sure you don't miss a single tip/tricks. Alternatively, subscribe via RSS/XML feed.
