Firefox: Add a Trusted CA

Posted by Vivek Gite <vivek@nixcraft.com>

The default Firefox comes with certificates from well-known commercial CAs. My ISP is also CA and Firefox cannot verified it because the CA is not recognized. How do I force Firefox to accept my ISPs certificate?

Like many apps Firefox needs to have a certificate from the CA that signed the web server's certificate. However, you can import a new CA certificate into Firefox version 3.5 using the following simple procedure:

[1]

Fire a Firefox browser (i.e. Launch Firefox)

Choose **Preferences** from the **Edit** menu.

Click the **Advanced** button.
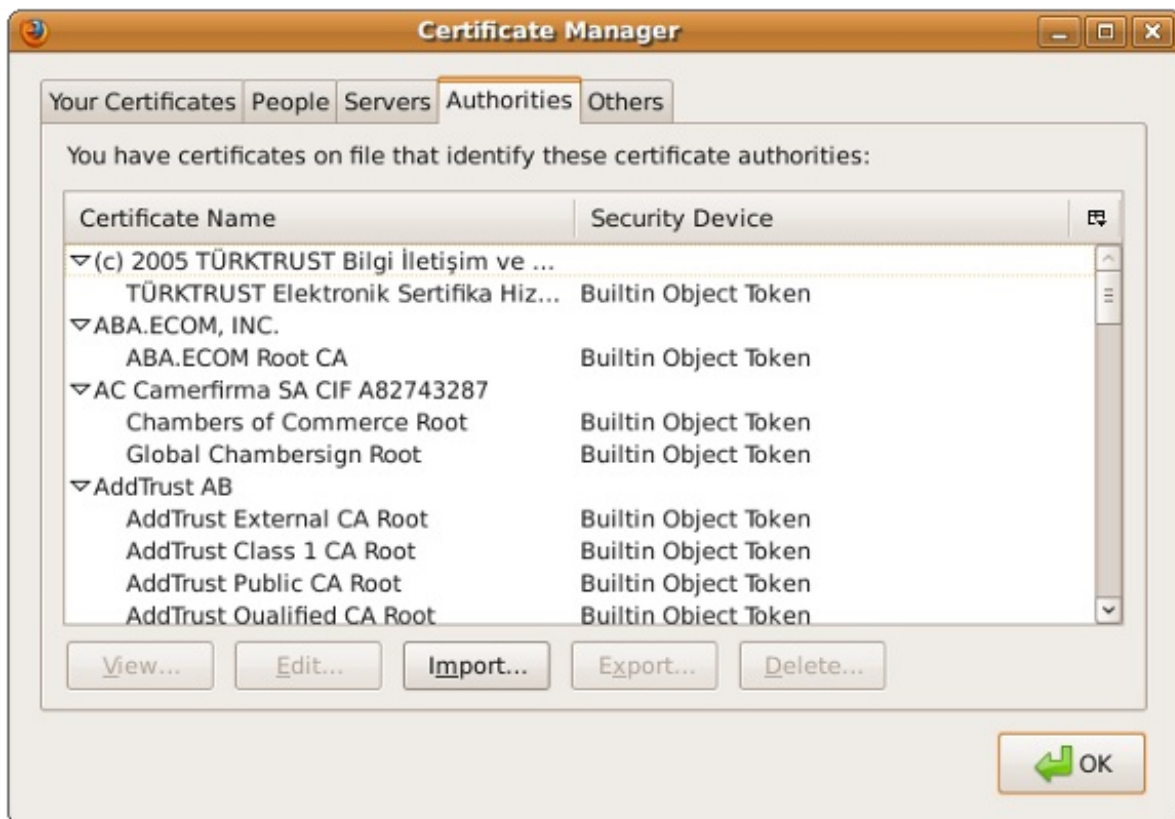

Select the **Encryption** pane.

[2]

Fig.01: Firefox View Certificate

Click the **View Certificates** button.

Click the **Authorities** tab.

Click the **Import** button at the bottom of the screen.

[3]

Fig.02: Firefox Install / Import CA Certificate

Navigate to the CA certificate and import it.
