CentOS: Install Packages Via yum Command Using DVD / CD as Repo

Posted by Vivek Gite <vivek@nixcraft.com>

How do I install packages via DVD / CD using yum command under CentOS Community Enterprise Linux version 5.x?

[1]

CentOS Linux comes with CentOS-Media.repo which is used to mount the default locations for a CDROM / DVD on CentOS-5. You can use this repo and yum to install items directly off the DVD ISO that we release. Open /etc/yum.repos.d/CentOS-Media.repo file, enter:

```
# vi /etc/yum.repos.d/CentOS-Media.repo
```

Make sure enabled is set to 1:

```
enabled=1
```

Save and close the file. To use repo put your DVD and along with the other repos, enter:

```
# yum --enablerepo=c5-media install pacakge-name
```

To only use the DVDmedia repo, do this:

```
# yum --disablerepo=\* --enablerepo=c5-media install pacakge-name
```

OR use groupinstall command

```
# yum --disablerepo=\* --enablerepo=c5-media groupinstall [2] 'Virtualization'
```
