Disable ctrl+alt+del on Centos Linux server

Posted by Vivek Gite <vivek@nixcraft.com>

Q. How do I disable CTRL + ALT + DEL reboot keys shortcut on Linux server?

A. CTRL+ALT+DEL reboot is configured using /etc/inittab file. Open this file and remove ctrlaltdel entry [1]
(login as root):
 # vi /etc/inittab
Find line:
ca:12345:ctrlaltdel:/sbin/shutdown -t1 -a -r now
Replace it (i.e comment out theline by putting a hash mark (#) in front of it):
 # ca:12345:ctrlaltdel:/sbin/shutdown -t1 -a -r now
Close and save the file. Type command to reread /etc/inittab:
 # init q
