How To Specify and Browse Website Using IPv6 Address With Firefox, Opera Web Browser

Posted by Vivek Gite <vivek@nixcraft.com>

« « Previous in series [2]   Next in series » » [1]

Q. Now, I know how to configure IPv6 tunnel [4] but how do I browse website using IPv6 IP address like 2001:4860:0:2001::68 under Firefox or Opera web browser?
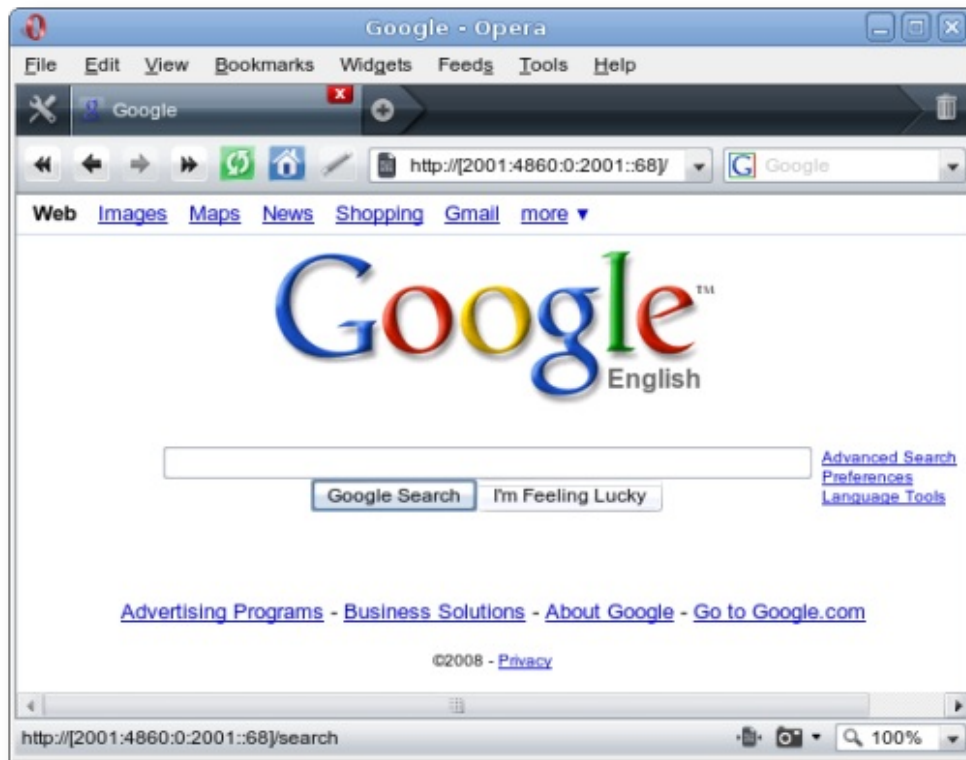

A. For command line or for browser IPv6 addresses need to be specified by enclosing addresses in square brackets like [2001:4860:0:2001::68].

Fire a webbrowser and type the following url:

http://[2001:4860:0:2001::68]/   [3]

[5]

(Fig.01: Browsing Website Using IPv6 Address)

I strongly recommend using DNS for resolving all IPv6 host names.
