sed Insert a Newline Into the RHS of a Substitution

Posted by Vivek Gite <vivek@nixcraft.com>

Q. How do I insert a newline into the RHS of a substitution using sed under Linux / UNIX like operating systems? My line pattern is as follows:

    This is a test. This is another input.

I'd like to insert a newline after dot (.).

A. Simple use sed command as follows:

```
echo 'This is a test. This is another input.' | sed -e 's/\./&\n/'
```

You need to substitute dot and simply insert newline (\n) to replace with it.
If you are using older sed version try:

```
echo 'This is a test. This is another input.'  |sed 's/\./& \
> /'
```

Sample output:

```
This is a test.
 This is another input.
```
