Linux / UNIX Print Large Banner on Printer

Posted by Vivek Gite <vivek@nixcraft.com>

How do I print large banner on printer under Linux / UNIX / BSD operating systems?

You can use banner command which, prints a large, high quality banner on the standard output. If the message is omitted, it prompts for and reads one line of its standard input. The output should be printed on paper of the appropriate width, with no breaks between the pages.

[1]

To print "Welcome", enter:

```
$ banner "Welcome"
$ banner -w80 "Welcome"
```

Where,

- -w80: Change the output from a width of 132 to width 80, suitable for a narrow terminal.
