# FreeBSD DJBDNS: Tinydns Add Additional Domain Names

Posted by Vivek Gite <vivek@nixcraft.com>

This entry is part 5 of 6 in the series  FreeBSD DJBDNS Server [1]

FreeBSD DJBDNS Server [1]

- FreeBSD Install DJBDNS Server [2]
- FreeBSD Configure DJBDNS TinyDNS Server [3]
- FreeBSD tinydns: Sets Up a DNS Publication / Authoritative Name Server [4]
- FreeBSD DJBDNS: Tinydns Create a Zone File For Domain [5]
- FreeBSD DJBDNS: Tinydns Add Additional Domain Names
- FreeBSD DJBDNS: Create Secondary TinyDNS Server [6]

How do I add additional domains names such as cyberciti.com and nixcraft.com to my existing tinydns servers ns1.nixcraft.in and ns2.nixcraft.in?

You can add additional domains to the same data config file as follows.

**DJBDNS** [7]

FreeBSD. [8]

Open /var/ns1.nixcraft.in/root/data file, enter:

```
# vi /var/ns1.nixcraft.in/root/data
```

Append cyberciti.com and nixcraft.com as follows:

```
#########################
# cyberciti.com zone
#########################
.cyberciti.com::ns1.nixcraft.in
.cyberciti.com::ns2.nixcraft.in
#define mx for cyberciti.com
@cyberciti.com::mail01.nixcraft.in:10
@cyberciti.com::mail02.nixcraft.in:20
#define A and www for cybercit.com
+cyberciti.com:74.86.48.99
+www.cyberciti.com:74.86.48.99

#########################
# nixcraft zone
#########################
.nixcraft.com::ns1.nixcraft.in
.nixcraft.com::ns2.nixcraft.in
#define mx for cyberciti.com
@nixcraft.com::mail01.nixcraft.in:10
@nixcraft.com::mail02.nixcraft.in:20
#define A and www for cybercit.com
+nixcraft.com:75.126.168.152
+nixcraft.com:75.126.168.152
```

Save and close the file. cd to /var/ns1.nixcraft.in/root and run "make". This compiles the data.cdb which tinydns reads:

```
# cd /var/ns1.nixcraft.in/root
# make
```

Again test newly added domain using host or other tools:

```
# host www.cyberciti.com
```

OR

```
# dnsip nixcraft.com
```
