What is my root password for MySQL?

Posted by Vivek Gite <vivek@nixcraft.com>

Q. I have just installed mysql. I don't know how to connect as well as what is my root or mysql admin password for MySQL?

A. Your default mysql password is empty (i.e. no password). For example:

- Username: root
- Password: empty

However if you use something like Plesk software use following information:

- User: admin
- Password: admin

Above is just a default password. If you are not sure about password, it is best to ask to person who has installed mysql for you.
