CentOS Linux apply package updates

Posted by Vivek Gite <vivek@nixcraft.com>

Q. I've CentOS Linux 5 Server and I'd like to apply all package and security update. How do I apply package updates from the Internet?

[1]

A. CentOS comes with yum command. It is a command-line interface to update packages. There is also a graphical tool called pup.

yum command

For a command-line interface over the ssh session, the the command as root user:

```
# yum update
```

pup command

To start the graphical Update tool, type the command:

```
# pup &
```
