UNIX / Linux list current logged in users

Posted by Vivek Gite <vivek@nixcraft.com>

Q. How do I print the user names of users currently logged in to the current UNIX / Linux host / server from a command prompt?

A. You need to use **users command**. It displays the login names of the users currently on the ystem, in sorted order, space separated, on a single line. It reads all information from /var/run/utmp file.

[1]

users command

Just open terminal or login over ssh session and enter the following command:

```
$ users
```

Output:

```
abhi charvi vivek vivek zcafe
```
