Solaris / OpenSolaris Mount Windows Shared (CIFS)

Posted by Vivek Gite <vivek@nixcraft.com>

How do I mount a CIFS Windows share under Solaris / OpenSolaris UNIX operating systems?

Simply use the following commands to mount a CIFS share.

Task: Turn on Samba Client Service

 [1]

```
svcadm enable network/smb/client
```

Task: Mount a Share

Type the following command to mount a CIFS shared called data from server called fileserver on the /data:

```
# mkdir /data
# mount -F smbfs //fileserver/sales /sales
# ls -l /sales
# cp /sales/copy/file /to/dest
# df
```

To view all available sharename, enter:

```
smbutil view //fileserver
smbutil view //windows2003
```
