Upgrade WHM / cPanel Linux server to EDGE release

Posted by Vivek Gite <vivek@nixcraft.com>

Q. How do I upgrade my CentOS Linux 5.0 dedicated server to WHM / cPanel edge release? [1]

A. You can upgrade to EDGE release from WHM manager. Please note that Edge is the bleeding edge tree. While it has the newest features; It has undergone the least amount of testing (if any). You generally shouldn't run this build unless you need a bug fix or feature in it. Once an equivalent CURRENT or RELEASE build has been released, you should switch away from this.

Configure EDGE upgrade

a] Just login to WHM

b] Look for Server Configuration

c] Click on Update Config

d] Set cPanel/WHM Updates option to Manual Updates Only (bleeding EDGE tree)

cPanel/WHM Updates

- Automatic (STABLE tree)
- Automatic (RELEASE tree)
- Automatic (CURRENT tree)
- Manual Updates Only (STABLE tree)
- Manual Updates Only (RELEASE tree)
- Manual Updates Only (CURRENT tree)
- (•) Manual Updates Only (bleeding EDGE tree)
- Never Update

cPanel Package Updates

- (•) Automatic
- Manual Updates Only
- Never Update

Security Package Updates

- (•) Automatic
- Manual Updates Only
- Never Update

e] Click on Save.

To start upgrade procedure

Look for cPanel

Click on Upgrade to Latest Version

Click on **Click Upgrade** button

Edge upgrade from a shell or command prompt

Login as the root via ssh. Edit /etc/cpupdate.conf file:

```
# vi /etc/cpupdate.conf
```

Find line

```
CPANEL=stable
```

Replace with:

```
CPANEL=manual-edge
```

Save and close the file. Now update to edge:

```
# /scripts/upcp --force
```
