OpenBSD Mount And Use a USB Flash Drive

Posted by Vivek Gite <vivek@nixcraft.com>

How do I mount and use a USB pen or hard disk under OpenBSD operating systems?

OpenBSD does supports USB storage devices such as pen and hard disk via emulated SCSI drives. [1]

First, insert your your USB flash drive in USB socket.

Next type the following command to create a directory (mount point), enter:

```
# mkdir /mnt/pen
```

Mount the flash drive using mount command at /mnt/pen, enter:

```
# mount /dev/sd0i /mnt/pen
```

You may need to replace /dev/sd0i with actual device name.

Now you can access the files at /mnt/pen:

```
# cd /mnt/pen
# ls -l
# cp filename /path/to/dir
```

Finally, unmount the flash filesystem using the following command:

```
# umount /mnt/pen
```
