Redhat / CentOS Linux list all packages available for installation

Posted by Vivek Gite <vivek@nixcraft.com>

Q. How do I list all packages available for installation from Internet using Red Hat Enterprise Linux or CentOS 5?

[1]

A. You can yum command and it has option to show a list of all packages that are not presently installed and can be installed via RHN or Internet.
yum list available
yum list available | less
yum list available | grep package
yum list available "pacakge"

A note about RHEL <= version 4.0

If you are using RHEL v4.0 or old version, use up2date command:

```
up2date --show-available
```
