Howto rebuild Apache for Cpanel Linux / UNIX Server (Control Panel)

Posted by Vivek Gite <vivek@nixcraft.com>

[1]
Q. I'd like to rebuild Apache web to include support for additional modules or to latest version. How do I rebuild Apache for Cpanel Server?

A. Building Apache is quite easy under Cpanel server.

Procedure to Rebuild Apache for Cpanel

Login as the root using ssh

Type the following commands:
 # cd /scripts
 # ./updatenow
 # ./easyapache

Just follow on screen instructions to rebuild Apache for Cpanel server under Linux/FreeBSD oses. Please note that you should see a menu on screen asking you which options you would like built into your apache install. Select options as per your requirements. Once it has completed it will automatically restart Apache for you and you will then be able to use the new features.
